

# Trimite J2904

## Electromagnetic Shield Coating

<b>Description</b>	An electrically highly conductive coating for plastic substrates, designed to meet the strictest control of electrical interference.
<b>Finish</b>	Matt.
<b>Features</b>	<ul style="list-style-type: none"> <li>• It is formulated using specially prepared metallic nickel to provide electromagnetic compatibility (EMC) on plastic housings for a wide range of electronic equipment.</li> <li>• Provides an effective shielding against radiated electromagnetic interference (EMI) and protection against electrostatic discharge (ESD).</li> <li>• Can be applied directly to most plastic substrates used in the manufacture of electronic housings.</li> <li>• Formulated to minimise settlement in the can and spray equipment lines.</li> <li>• A cost effective and efficient way of complying with the US Federal Communications Commission (F.C.C.) Docket 20780; the German Regulations V.D.E. 0871-0879 (the Association of German Electrotechnical Engineers); and has also been given approval by the US Underwriters Laboratory Inc.</li> </ul>
<b>Complies With</b>	Please consult Trimite.
<b>Product Code</b>	<b>J2904-</b> .
<b>Volume Solids</b>	Please consult Trimite.
<b>VOC's</b>	Please consult Trimite.
<b>Colour Range</b>	Metallic Grey.

<b>Film Thickness &amp; Coverage</b>	<b>Typical:</b>	<b><u>Dry</u></b> 50 µm	<b><u>Wet*</u></b> 100 µm	<b><u>Approx. Coverage*</u></b> 2 - 3 m <sup>2</sup> /per kg
--------------------------------------	-----------------	----------------------------	------------------------------	---

\* The above wet film thicknesses is approximate and is based on the typical degree of thinning recommended under 'Application Details'.

Actual coverage varies considerably with factors including surface porosity, roughness, application methods and conditions.

<b>Drying &amp; Overcoating Times</b> at Typical DFT	Surface Dry:	<b><u>10°C</u></b> 30 min	<b><u>20°C</u></b> 15 min	<b><u>30°C</u></b> 10 min
	Hard Dry:	2 h	50 min	25 min
	Overcoat Min:	not normally overcoated		

Note: properly painted parts should attain a conductivity of less than 1ohm square in one hour. Maximum conductivity is normally achieved in 12 hours.

Drying and overcoating times can be greatly affected by method and conditions of application such as thickness applied, temperature, ventilation etc. Data above are given as a guide.

**TECHNICAL DATA SHEET****Trimite J2904****Electromagnetic Shield Coating**

<b>Surface Preparation</b>	<ul style="list-style-type: none"><li>• <b>Plastics:</b> the substrate must be thoroughly clean and free from mould release agents and static charges. Owing to the sensitivity of many plastics to certain solvents, <b>Antistatic Cleaner J131</b> should be used.</li><li>• <b>Priming:</b> J2904 is suitable for direct application to thermoplastics. For the thermoset range of plastics (i.e. Glass Reinforced Polyesters, Glass Reinforced Phenolics, SMC, DMC and Polyurethane Foam mouldings) <b>Trimite AP210</b> Two Pack Polyurethane Primer or <b>Trimite AP262</b> Two Pack Acrylic Primer should be used. Please consult Trimite for specific project advice.</li></ul>
<b>Mixing</b>	Thoroughly stir the coating before use. A power mixer is highly recommended. A wide-bladed stirrer is essential for adequate mixing if only hand stirring. Stir occasionally during use to maintain an homogenous mix.
<b>Mix Ratio</b>	Not applicable – single pack product.
<b>Application Conditions</b>	Throughout the application and the drying/curing time of coatings: (a) good ventilation is required; (b) do not apply when damp weather conditions are likely; (c) the substrate temperature should be at least 3°C above the Dew Point; and (d) the RH (Relative Humidity) should be below 85%. It is advisable not to apply the product when the ambient temperature falls below 5°C. The paint temperature at the time of application should ideally be 15° - 20°C.
<b>Application Details</b>	<ul style="list-style-type: none"><li>• Designed for application by conventional spray.</li><li>• Thinner PT1000 or PT1002 (depending on the type of plastic substrate) may be added up to 50% by volume, to obtain a viscosity of 45 – 50 seconds at application temperature using a BS B4 viscosity cup.</li><li>• Film Thickness: To achieve the full shielding properties, J2904 should be applied in several passes to achieve a wet film thickness of 100 microns, which will result in a dry film thickness of approximately 50 microns.</li></ul>
<b>Thinner/Cleaner</b>	PT1000 or PT1002 Thinner / J103 Gun Cleaner.
<b>SG</b>	1.85 ± 0.15 kg/l.
<b>Flash Point</b>	21° – 32°C.
<b>Shelf Life</b>	Min. 1 year from date of delivery when correctly stored in unopened containers.
<b>Storage</b>	The product should be stored in cool, dry, frost-free conditions, in sealed containers. Most paint materials will apply optimally when at 15° - 20°C.
<b>Health &amp; Safety</b>	Refer to the product's Safety Data Sheet and safety advice on the product label before use.
<b>Date of Issue</b>	May 2024.

## TECHNICAL DATA SHEET

# Trimite J2904

## Electromagnetic Shield Coating

### Attenuation Efficiency

Measured readings of a typical 52 micron application under actual test conditions at an independent laboratory.

Frequency	Attenuation	Frequency	Attenuation
MHz	dB	MHz	dB
0.1	125	100	87
0.2	127	150	90
0.4	122	200	100
0.6	123	250	82
1	120	300	71
2	118	400	70
4	100	600	67
6	90	700	68
15	90	800	56
40	87	900	58
60	82	1000	52

Information provided in this leaflet is given in good faith but without warranty or assumed liability, as the conditions of application and use are beyond our control. Data are accurate to the best of our knowledge at the time of issue but may be revised in the light of new knowledge and the user should check that data are current before use. The user must satisfy themselves about the product's suitability for their own purpose and refer to the Safety Data Sheet for this product before use. For industrial or professional use only unless specifically stated otherwise.
